

KEVIN W. WANYONYI

Senior Full-Stack Software Developer

0726 076 333 | g.nanguti@gmail.com | wanyonyi.co.ke | github.com/Nanguti1

PROFESSIONAL SUMMARY

Senior Full-Stack Software Developer with 8+ years of professional experience designing, developing, deploying, securing, and supporting enterprise software systems across insurance, healthcare-adjacent, telecommunications, education, recruitment, e-commerce, and business management sectors.

Delivers production applications using Laravel, PHP, Django, Next.js, React, Vue.js, MySQL and PostgreSQL — and stays involved after launch, keeping systems available, secure and straightforward to maintain as they grow.

Hands-on experience with cloud infrastructure, Linux server administration, VPS management, DigitalOcean deployments, AWS S3 storage, CI/CD, API integration, database optimization, and business process automation. Working knowledge of Microsoft Power Automate and Power BI for workflow automation and reporting.

Also spends time mentoring other developers, tightening up development processes, and writing documentation that the next person can actually use, rather than treating those as an afterthought to the code.

CORE COMPETENCIES

Enterprise Software Engineering

- Enterprise Application Development
- Software Architecture & Design
- Full-Stack Development
- System Modernization
- Business Process Automation
- REST API Design & Integration
- Enterprise Systems Integration
- Production Support
- Performance Optimization

Security & Reliability

- Secure Software Development
- Authentication & Authorization
- RBAC
- JWT Authentication
- OWASP Secure Coding Principles
- Application Hardening
- Incident Troubleshooting
- High Availability Systems
- Backup & Recovery

Cloud & Infrastructure

- DigitalOcean Cloud
- VPS Administration
- Linux Server Administration
- Docker
- AWS S3
- Nginx
- SSL Certificate Management
- Domain & DNS Management
- CI/CD Pipelines
- Production Deployments

Database & Reporting

- MySQL
- PostgreSQL
- MongoDB
- Database Design
- Query Optimization
- Performance Tuning
- SQL
- Reporting Solutions
- Power BI (Working Knowledge)

Leadership: Technical Leadership • Code Reviews • Solution Architecture • Stakeholder Engagement • Technical Documentation • Agile/Scrum • Cross-functional Collaboration • Mentoring Developers

TECHNICAL SKILLS

Languages

- PHP
- Python
- JavaScript (ES6+)
- TypeScript
- SQL

Frontend

- Next.js
- React.js
- Vue.js
- HTML5
- CSS3
- Tailwind CSS

Cloud & Infrastructure

- DigitalOcean
- AWS S3
- Linux (Ubuntu)
- VPS Administration
- Docker
- Nginx
- SSL Certificates
- Domain & DNS Management
- CI/CD
- Git / GitHub / GitLab
- Vercel

Backend

- Laravel
- Yii2
- Django
- Node.js
- Express.js

Databases

- MySQL
- PostgreSQL
- MongoDB

Automation & Enterprise Platforms

- Microsoft Power Automate (Working Knowledge)
- Microsoft Power BI (Working Knowledge)
- ERPNext
- WordPress
- CMS Platforms

PROFESSIONAL EXPERIENCE

Senior Full-Stack Software Consultant

June 2023 – Present

Designs, builds, deploys and supports software for clients across several industries, usually owning a project from initial requirements through to production and beyond.

Key Achievements

- Took projects from requirements through to production, building systems clients rely on for day-to-day operations rather than prototypes that get shelved after the demo.
- Architected Laravel and Django applications designed to handle growing user bases and data volumes without needing a rewrite down the line.
- Developed responsive web applications using Next.js, React, Vue.js and Tailwind CSS.
- Built secure RESTful APIs and integrated third-party platforms, payment gateways, and external services.
- Automated recurring business workflows using Microsoft Power Automate and custom web tooling, cutting down manual, repetitive tasks.
- Designed relational database schemas and tuned SQL queries to cut down slow page loads and reporting times.
- Deployed and managed production systems on DigitalOcean cloud infrastructure and Linux VPS environments.
- Configured Nginx web servers, SSL certificates, domain management, and production environments.
- Used AWS S3 for file storage and backups.
- Managed Docker-based deployments and CI/CD workflows.
- Investigated and resolved production incidents while keeping systems available for users.

- Wrote the documentation other developers actually read: deployment guides, API references, and architecture notes.
- Worked directly with business owners to turn what they actually needed into working systems, not just what was written in the original spec.

SELECTED ENTERPRISE PROJECTS

RoyalMed – Hospital Information System (HIS)

Lead Solution Architect & Senior Full-Stack Software Developer

Designed and built RoyalMed, a Hospital Information System for Kenyan healthcare facilities, from small clinics to hospitals. It replaces paper-based and fragmented systems with a single platform covering clinical care, billing, and SHA/MOH compliance reporting.

Key Contributions

- Led the architecture and build of the full system, covering both clinical departments and administrative back-office functions.
- Designed the system in independent modules so new departments or features can be added without reworking the rest of the platform.
- Developed secure RESTful APIs powering the web application, internal modules, and third-party integrations.
- Built the patient management module covering demographics, medical history, chronic conditions, allergies, insurance details, and document storage.
- Developed clinical workflows for patient triage, consultations, SOAP notes, electronic prescriptions, and vital signs tracking.
- Designed and built the laboratory module, covering sample collection through processing, verification, and result reporting.
- Built the pharmacy management system: inventory, dispensing, batch tracking, purchase orders, and expiry monitoring.
- Built the billing and finance module: invoicing, M-Pesa payments, insurance billing, payment plans, and financial reporting.
- Implemented SHA/NHIF insurance workflows including pre-authorizations, claims processing, insurer management, and reconciliation.
- Developed appointment scheduling and queue management for clinicians and dental practitioners.
- Built the dental module: treatment plans, dental charting, and chair scheduling.
- Designed vaccination workflows covering schedules, certificates, and reminders.
- Developed inventory and procurement modules for stock control, purchasing, transfers, and warehouse operations.
- Built patient and staff self-service portals for appointments, lab result access, billing information, schedules, and internal communications.
- Designed reporting modules covering financial performance, disease surveillance, lab and pharmacy operations, clinician productivity, and regulatory submissions.
- Implemented Role-Based Access Control (RBAC) with department-specific permissions and workflow restrictions.
- Built audit logging, activity tracking, and document versioning so any change to patient data can be traced back to a user and a time.
- Integrated Two-Factor Authentication (2FA), session management, and passkey support.
- Tuned database design and SQL queries to keep the system responsive as patient and clinical records grew.
- Wrote the architecture notes, deployment procedures, API docs, and support runbooks the team uses to operate the system.

Technologies: Laravel 13 • React 19 • TypeScript • MySQL • Tailwind CSS • REST APIs • Docker • DigitalOcean • Linux • Nginx • AWS S3 • M-Pesa Integration • SHA/NHIF Integration • RBAC • JWT Authentication

Hamaline Insurance Management Platform

Lead Solution Architect & Full-Stack Developer

Designed and delivered an insurance management platform covering policy administration, claims, reporting, customer servicing, and day-to-day operations.

Key Contributions

- Led end-to-end solution architecture.
- Designed the application and database architecture from the ground up.
- Built modules for policy, claims, customers, reporting, and operations.
- Built secure REST APIs supporting internal and third-party integrations.
- Implemented role-based security and access controls.
- Designed management dashboards and reporting tools.
- Optimized database performance as data volume grew.
- Deployed and maintained the production system, handling fixes and improvements after launch.

Technologies: Laravel • PHP • MySQL • Docker • Linux • DigitalOcean • REST APIs

BLVDGuide Marketplace Platform

Solution Architect & Full-Stack Developer

Live site: <https://blvdguide.com/>

Designed and developed a marketplace platform enabling users to discover and manage commercial spaces across multiple categories.

Key Contributions

- Designed the platform's application architecture.
- Developed responsive React interfaces.
- Built Laravel backend services.
- Implemented secure authentication.
- Designed the relational database and optimized query performance.
- Improved SEO and application performance.
- Delivered cloud-hosted production deployments.

Technologies: Laravel • React • Tailwind CSS • MySQL

2B Gamers E-Commerce Platform

Full-Stack Software Developer

Live site: <https://2bgamersstore.co.ke/>

Developed a secure e-commerce platform supporting inventory management, online payments, reporting, and order processing.

Highlights

- Integrated M-Pesa payment gateway.
- Built REST APIs.
- Designed secure transaction workflows.
- Optimized database performance.
- Supported production deployments and maintenance.

CRM Platform

Software Developer

Developed CRM capabilities supporting workflow automation, reporting, and customer lifecycle management.

Highlights

- Backend development using Django.
- PostgreSQL optimization.
- Secure REST API development.
- Operational reporting dashboards.
- Ongoing system enhancements.

Simplifi Networks Platform

Full-Stack Developer

Live site: <https://simplifinetworks.com/>

Highlights

- Built a product distribution platform for telecommunications and networking products, with a Next.js front end and a Laravel back end.
- Designed the product catalog architecture, content management features and API integrations with partner systems.
- Supported deployment, production operations and database optimization.

Technologies: Next.js • Laravel • PHP • MySQL

EMPLOYMENT HISTORY

Software Developer

May 2022 – May 2023

AfriQ Network Solutions Ltd

Developed and maintained enterprise applications, with a focus on reliability and security in production.

Achievements

- Developed Laravel systems.
- Built RESTful APIs.
- Designed and optimized SQL databases.
- Supported production deployments.
- Improved application performance.
- Resolved production incidents.
- Worked within an Agile delivery process.
- Collaborated with cross-functional teams.

Software Developer

October 2018 – April 2022

MwalimuPLUS & Ajira Connect

Designed and maintained web applications supporting education, recruitment, reporting, and workflow automation.

Achievements

- Developed applications using Laravel and Yii2.
- Designed secure authentication systems.
- Built reusable backend services.
- Developed reporting dashboards.
- Optimized SQL performance.
- Automated business workflows.
- Maintained production applications.
- Worked closely with business stakeholders.

CLOUD INFRASTRUCTURE & DEVOPS EXPERIENCE

- Extensive DigitalOcean cloud administration.
- Linux VPS administration.
- Ubuntu Server management.
- Docker containerization.
- AWS S3 storage integration.
- Nginx configuration.
- SSL certificate deployment and renewal.
- Domain and DNS management.
- Production monitoring.
- Server performance optimization.
- Backup and recovery.
- CI/CD deployment pipelines.
- Git-based release management.

EDUCATION

Bachelor of Science (Computer Science)

Multimedia University of Kenya | 2013 – 2017

REFEREES

Available upon request.
